Control flow statement

- Control flow statement can be categorized mainly in three following ways.
 - Decision-making statements
 - Looping statements
 - Jump statements

Control flow statement

If statement

```
if (condition) {  
    //statement(s)  
}
```

If - else statement

```
if(condition) {  
    // statement(s);  
} else {  
    // statement(s);  
}
```

If - else - if statement

```
if (condition1) {  
    // statement(s)  
}  
else if(condition2) {  
    // statement(s)  
}  
else if (conditionN) {  
    // statement(s)  
}  
.  
.  
else {  
    // statement(s)  
}
```

Nested if statement

It is possible to write an if in another if statement also.

Swith Statement

```
switch( expression )
{
    case value-1:{
        //statement(s)
        Block-1;
        }
        break;

    case value-2:{
        //statement(s)
        Block-2;
        }
        break;

    case value-N:{
        //statement(s)
        Block-N;
        }
        break;

    default: {
        //statement(s);
        }
}
```

While Loop

```
while(condition) {  
    // loop body  
}
```

for Loop

- `for(Initialization; condition; incr/decr) {`
 - `// loop body`
- `}`

for Loop

- for (var i in expression) {
 - //statement(s)
- }

do-while Loop

```
do {  
    // loop body  
} while(condition);
```

**THANK YOU
FOR YOUR
ATTENTION**
